Health and Safety

Complete information about Health and Safety regulations and certificates

This is an official declaration of Preciosa on legislative measures admitted in relation to the social interest in Health, Safety and Environment Protection.

CPSIA

Territory: USA

Restriction subject: Limits for lead contained in components intended for children's fashion jewellery

A U.S. federal law „Consumer Product Safety Improvement Act“ known as CPSIA came into force in 2009. Based on this law it is impossible to sell fashion jewellery containing more than 100 ppm of lead (0,01%) to children under 12 in the USA as from 14.8.2011. Preciosa crystal glass melts do not meet this required limit.

Some states, such as California and Illinois adopted further stricter legislative measures beyond the requirements of CPSIA, aimed at reducing the potential negative impacts arising from an excessive use of lead in consumer products including fashion jewellery for children.

The adopted measures partially touch on the use of crystal product supplied by Preciosa as well, even though it has been proved that the lead bonded in crystal does not spontaneously leak out and therefore there is no presumable risk of exposure to a dangerous amount of lead when handling it.

All Preciosa crystal products are in compliance with the US norm for toy safety ASTM F 963-7.

Proposition 65

Territory: California, USA

Restriction subject: Glass melts and products containing lead intended for sale in the state of California, USA

Hereby we would like to point out that Proposition 65 is still in force. In the event of a failure to comply with it, you can be strictly sanctioned according to California law.

ROHS – Restriction on use of Hazardous Substances

Territory: European Union

Restriction subject: Electric and electronic products produced or imported into EU

The Directive **RoHS 2002/95/EC** regulates the use of certain hazardous chemical elements in electric and electronic goods (e.g. watches, mobile phones, chandeliers, etc.). A limit of 0,1% (1000 ppm) Pb is the maximum allowed for the use of lead in electric and electronic materials.

The European Commission granted an exemption for the use of lead in the lead crystal glass melts in October 2006. This exemption **has been extended by the decision of the European Commission from 24th of September 2010 issued under No. 2010/571/EU indefinitely with unlimited validity.**

This exemption means that the products made of the Preciosa glass melt types that are in compliance with the Directive 2002/95/EC – RoHS can continue to be used without any restrictions and until further notice to decorate all types of electric and electronic products and appliances.

Glass melts in compliance with RoHS :

Crystal, Alexandrite, Amethyst, Aqua Bohemica, Aquamarine, Black Diamond, Blue Zircon, Capri Blue, Deep Tanzanie, Emerald, Fuchsia, Gold Beryl, Gold Quatr, Green Turmaline, Chrysolite, Indicolite, Jet, Jonquil, Light Amethyst, Light Burgundy, Light Colorado Topaz, Light Peach, Light Rose, Light Sapphire, Montana, Olivine, Peridot, Pink Sapphire, Rose, Ruby, Sapphire, Smoked Topaz, Tanzanite, Topaz, Turquoise, Violet, White Opal, including all colour finishes and coatings applied to all the glass colours stated hereinbefore. Products from glass melts in compliance with RoHS can be used as decorative parts in electric and electronic appliances without any restrictions.

Glass melts NOT in compliance with RoHS:

Citrine, Sun, Hyacinth, Coral, Light Siam, Siam, Garnet. Glass melts that are NOT in compliance with RoHS must not be used as decorative parts of electric and electronic appliances.

REACH – Registration, Evaluation, Authorisation and Restriction of Chemical Substances

Territory: European Union

Restriction subject: Human Health and Environment Protection against adverse effects of chemical substances

The European Commission elaborated a Directive (EC 1907/2006) known as REACH with the aim to ensure Human Health and Environment Protection against adverse effects of chemical substances. The Directive imposes – to all companies conducting business with chemical substances - to adopt compulsorily “a special chemical substances work regime”. (REACH is valid from 1st of July 2007.)

Producers, importers and follow-up users of chemical substances and/or substances contained in preparations and in items MUST, in compliance with the Directive, ask for their registration at the European Chemical Agency as of 1st of June 2008. The obligation to register in relation with chemical composition is mainly related to chemical substances and preparations made of them, BUT NOT according to the article 7, the paragraph 1 of the REACH Directive to final products, i.e. items which can be considered – under standard or reasonable foreseeable conditions of use – as completely safe.

Preciosa does not supply either chemical substances or chemical preparations or mixtures on the market. The products that we supply are final products that meet the above mentioned requirements. This means that they are not subject to the REACH registration. Our products do not contain any SVHC substances stated in appendix XIV of REACH regulation. The Preciosa Company or its customers are therefore not currently obligated to take any measures related to this matter.

At the same time we would like to assure you that all the chemical substances which we buy are in compliance with the REACH Directive and the way in which Preciosa handles them meets the strictest safety regulations to guarantee Human Health and Environmental Protection.

EN 71 – The use of Preciosa crystal products in products for children

Territory: European Union

Restriction subject: Regulation EN 71 – Toy safety – part 3, edition 1996/A1, issue 2001

Preciosa crystal products are in compliance with the conditions set by the European norm EN 71 – Toy safety – part 3. This means that Preciosa crystal products can be safely used in products for children, such as fashion jewellery for children.

Oeko-Tex® Certificate

Territory: European Union, worldwide

Restriction subject: Harmful substances in products according to the Oeko-Tex® Standard 100

Preciosa products meet the requirements for materials coming into direct contact with human skin.

AZO Test

Territory: worldwide

Restriction subject: AZO compounds in products

Preciosa, a.s. declares that no raw materials used in the production contain AZO compounds and that these substances do not arise as products of Preciosa production technologies. None of our products contain AZO compounds and never come into contact with them in no way. For this reason it is not necessary to prove the absence of AZO compounds using the AZO test.

Content of lead, cadmium and chromium in foiling

Territory: Worldwide

Restriction subject: Heavy metals in products (lead, cadmium, chromium)

Foiling supplied on Preciosa products does not show traces of lead, cadmium and chromium.

The following types of Preciosa foiling:

- Gold foiling
- Standard foiling
- H.Y.T. Colours foiling

contain, based on analysis carried out by an independent testing laboratory No. 1455, accredited by the Czech institute for Accreditation, an amount of the lead, cadmium and chromium content under the measurable amount of 0,002% (20ppm). This means that these types of foiling do not show measurable amounts of lead, cadmium and chromium and therefore it is possible to handle them in the same way as items not containing these substances at all.

General warning

Loose stones produced in Preciosa may be dangerous for children, in cases when they inhale or swallow them. Therefore when working with loose stones, do not leave children without adult supervision. In case that it is not possible to guarantee such supervision, PRECIOSA recommends preventing children from accessing the stones. The stones are intended for decorative purposes and should not be used as a toy in any case. In case of inhaling or swallowing contact a doctor.

MAXIMA by PRECIOSA®

Lead-Free Brilliance

MAXIMA is the premium PRECIOSA® Genuine Czech Crystal™ quality. The MC Chaton MAXIMA combines high-quality lead-free* crystal made with PRECIOSA® *Hi-Pure Crystal*™ technology with an original patented 15-facet cut which is foiled with the innovative *Dura-Foiling*™ layer. The result is a PRECIOSA Crystal Component of unrivalled optical-aesthetic properties, outstanding resilience, exceptional durability, and one whose authenticity is quickly and unmistakably verifiable.

1 CRYSTAL

The Look and Feel of Full-Lead Crystal

Hi-Pure Crystal™ technology, along with a patented combination of raw materials, make it possible to create lead-free* crystal with a refractive index of 1.585, which is fully comparable to full-lead crystal.

2 CUT

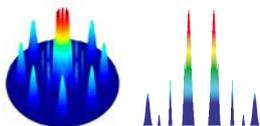

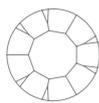

Perfect Geometry and Improved Optical Properties

When compared to a regular 8-facet cut, the internationally patented 15-facet MC Chaton MAXIMA, consisting of nine large and six smaller facets, provides:

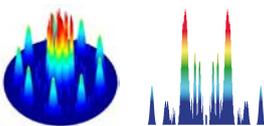

- 2x better light distribution
- 2x more frequent scintillation with intense fire effects
- Significantly greater brightness
- Elimination of unwanted dark areas
- Visible differentiation due to an exclusive-looking cut

NACRE PEARLS

■ Nacre Pearls are a superb imitation of natural or cultivated pearls. They have a crystal ball core which has several coats of nacre applied, using a technology that is very similar to the natural production of pearls. Our Nacre Pearls have a gloss on them which makes them indistinguishable from genuine pearls. In accord with the highest standards of quality and ecological demands our Nacre Pearls and Nacre Cabochons are lead-free (lead content < 0.009%) and meet the CPSIA (Consumer Product Safety Improvement Act), as well as other world standards. They are also highly resistant to abrasion, UV radiation, and to alcohol-based perfumes. Our pearls are available loose or in strands.

■ Cabochons are a special collection of stones created from hand-molded glass. Using traditional glass making techniques, Preciosa® produces them in an exciting array of shape and colour combinations. Opaque and transparent colours imitate such genuine gems as diamond, ruby, topaz, sapphire and amethyst. We also offer fabulous imitations of all the best-known natural semi-precious stones. Our Special Stones are used mainly in the jewellery industry and can be tailored to meet each customer's specifications. All our Special Stones will retain their beautiful luster for years to come.

Shapes and Colours

Cubic Zirconia

This perfectly structured man-made stone is the best alternative to true diamonds. Free of inclusions, totally transparent and possessing a brighter fire than diamonds. It is available in a variety of attractive colours.

Chemical composition $ZrO_2+Y_2O_3$ | Cubic structure | Hardness 8.5°Mohs | Density 5.9g/cm³ | Refractive index 2.17 | Heat Resistance up to 600°C / 1,112°F (Black Cubic Zirconia up to 300°C / 572°F)

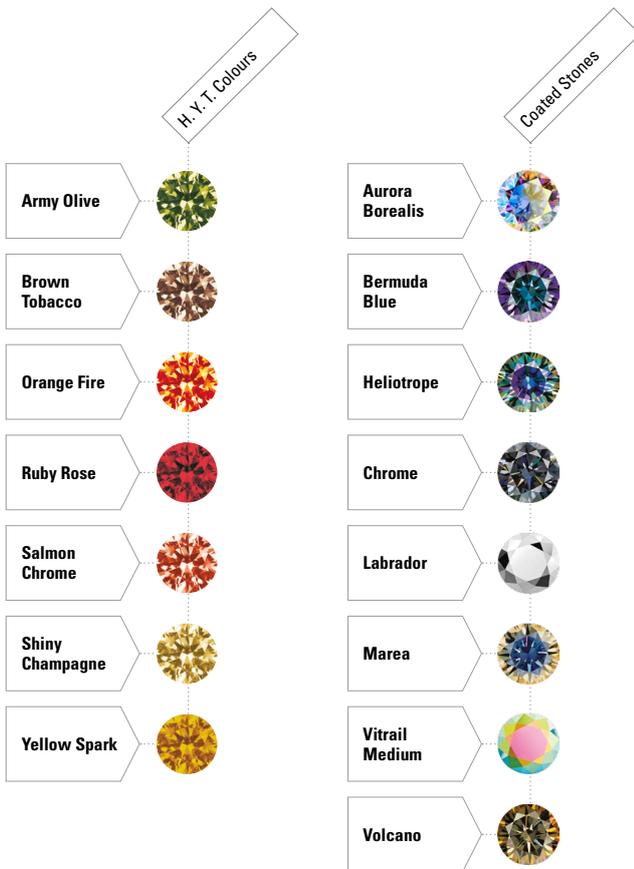

NOTE: * Only on request

For our current offer and the availability of goods, please visit our website at www.preciosa.com or call Preciosa Customer Centre.

Cubic Zirconia – H.Y.T. Colours[®], Coated Stones

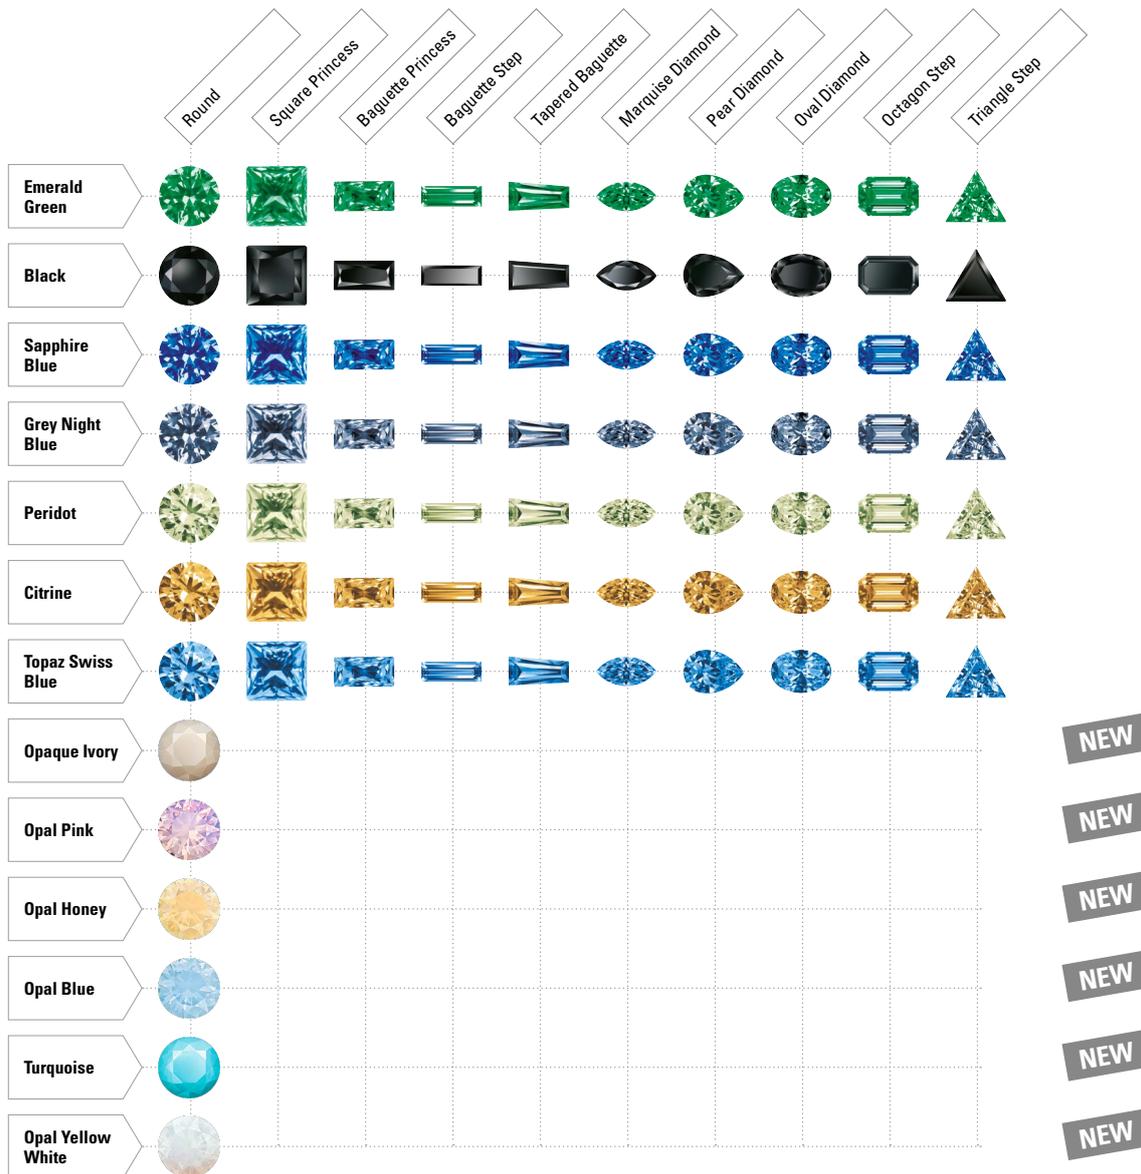

A wide array of different colours created with the application of a thin colour layer on the stone.

Nanogems

Nanogems completely imitate their gemstone counterparts in colour, brightness, hardness and density. High thermal shock resistance makes this material ideal for use in the lost-wax casting method. It is also resistant to acids, bases and humidity, and its properties will remain stable for centuries.

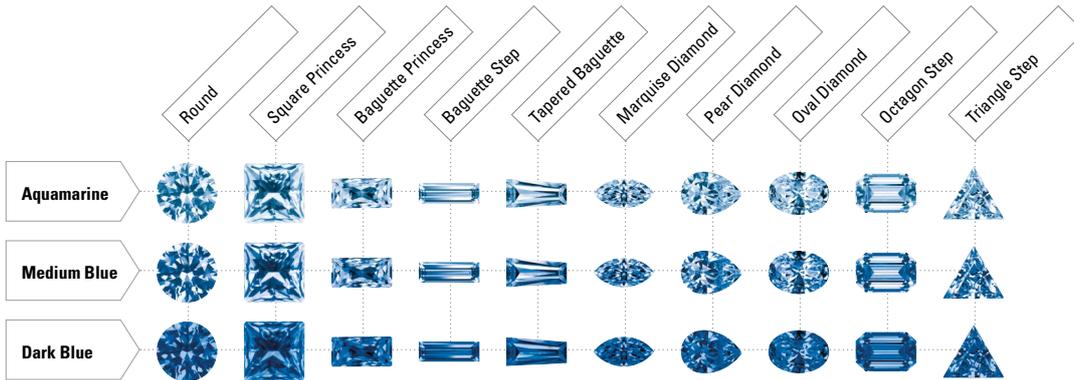

Chemical composition Al_2O_3 , MgO, TiO_2 , SiO_2 | Glass-ceramic structure | Hardness 6.5–7°Mohs | Density 2.8–3.3 g/cm³ | Refractive index 1.62–1.64 | Heat Resistance up to 900 °C / 1,652 °F | Material exclusively manufactured by Formica Co., Ltd. sole producer in the world

Synthetic Spinel

Synthetic spinel continues to be made for several reasons. First, because it is slightly softer than synthetic corundum, it can be fashioned more rapidly and less expensively. Secondly, several of the colors in which it is made are better imitation for a number of natural stones than those made in synthetic corundum.

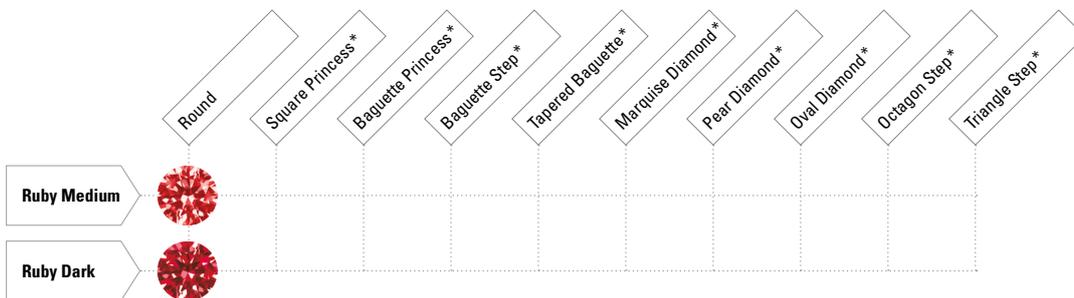

Chemical composition $MgAl_2O_4$ | Cubic structure | Hardness 8°Mohs | Density 3.6g/cm³ | Refractive index 1.5–1.7 | Heat Resistance up to 1,100 °C / 2,012 °F

Synthetic Corundum

This material is primarily valued for its intense colour and clarity, especially the bright reds. Corundum is the second hardest material known after diamond.

Chemical composition Al_2O_3 | Trigonal structure | Hardness 9°Mohs | Density 3.9g/cm³ | Refractive index 1.7 | Heat Resistance up to 1,700 °C / 3,092 °F

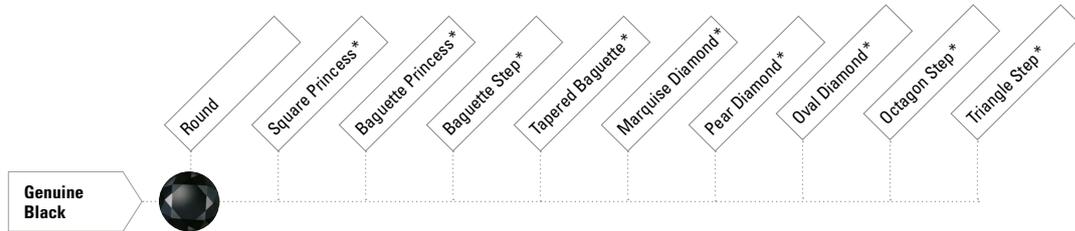

NOTE: * Only on request

For our current offer and the availability of goods, please visit our website at www.preciosa.com or call Preciosa Customer Centre.

Genuine Spinel

Extremely durable, spinel stones are suitable for all jewellery purposes.

Chemical composition $MgO(Fe, Al)_2O_3$ | Cubic structure | Hardness 7.5–8°Mohs | Density 3.8g/cm³ | Heat Resistance up to 1,200 °C / 2,192 °F

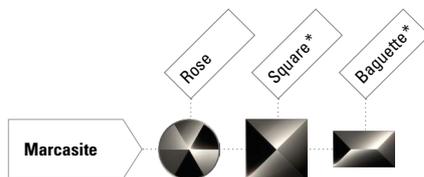

NOTE: * Only on request

For our current offer and the availability of goods, please visit our website at www.preciosa.com or call Preciosa Customer Centre.

Marcasite

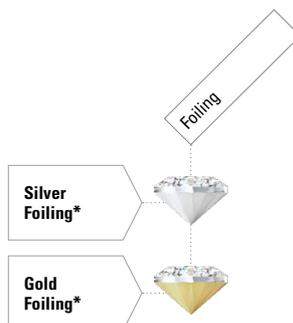

With its unique silvery-black, almost gun-metal appearance, marcasite is an attractive mineral. The stones have a rose cut, allowing the many facets to reflect light and give jewellery its characteristic sparkle.

Chemical composition FeS_2 (pyrite) | Cubic structure | Hardness 6–6.5°Mohs | Density 4.9–5.2g/cm³ | Heat Resistance up to 200 °C

Cubic Zirconia – Foiling

Foiling is the application of a reflective silver layer on the underside of the stone to create maximum brilliance. Foiled stones are perfectly suitable for gluing because they do not lose their optical characteristics.

NOTE: * Available for all colours and materials

Flat Back Stones

These stones are designed for applications by gluing and could have a highly resistant multilayer silver foiling that protects against damage and intensifies their brilliance.

NOTE: * Other colours available on request.
